

Bremtec Tube Nut Ratchet Spanner

Part No: LW0001

Tightening tube nuts on brakes can be a real pain. They are often in a confined space and offer limited ability to get a decent turn when undoing or tightening.

Introducing the Bremtec ratchetting tube nut spanner.

Handling the two most common sizes - 10mm and 11mm - this tool allows the mechanic to slip the spanner through the brake line and then tighten or undo the flare nut with a ratchetting motion.

This tool is a must for every workshop. Makes the job easier and faster.
